

Is Fatigue Common in Asthma?

by NEWLIFEOUTLOOK TEAM

The Battle Against Fatigue

Airway obstruction limits the amount of air that is able to get into your system and get to the muscles that need it, which can cause the fatigue in your asthma. Avoiding triggers of asthma will help to keep your airways clear. Keep a tracker on your phone that you can easily record any situation you're in that you experience your asthma. If your asthma is exercise-induced, you should build up your resiliency to exercise over time and use your inhaler, since this may help you to improve your endurance and strength.

- Sense of self
- Your appetite

Measuring Fatigue

The **Fatigue Severity Scale (FSS)** is a self-reported questionnaire used to measure your fatigue. It consists of ...

NINE Questions, each rated on a scale of 1-7

To score the **Fatigue Severity Scale** either add all items together (this will range from 9-63) or find the mean by adding your items together and dividing by 9 (this will range from 1-7). In either case, the higher the number you calculate is, the more fatigued you are.

Tips for Reducing Fatigue

- Quantity & Quality of Sleep**
 - Have a regular bed time and wake up time
 - Use your bed just for sleeping
 - Do quiet activities if you're not sleepy
 - Room should be dark and quiet
- Proper Nutrition**
